AWS Hands-on Mini Projects Assignment

Project 1: Highly Available Static Website

- Launch EC2 in one Availability Zone
- Configure Security Groups for HTTP and SSH
- Attach EBS volume and host a static website
- Store backups in S3
- Create EBS snapshot and AMI
- Launch EC2 in another AZ using AMI

Project 2: EC2 Disaster Recovery Simulation

- Deploy application on EC2
- Create EBS snapshot and AMI
- Terminate EC2
- Restore EC2 using AMI and snapshot
- Validate data and application recovery

Project 3: Secure Media Hosting Platform

- Launch EC2 with restricted SSH access
- Create private S3 bucket
- Upload media files to S3
- Serve media via EC2 web server

Project 4: Golden AMI Deployment

- Configure EC2 with web server
- Create Golden AMI
- Launch multiple EC2 instances from AMI
- Verify identical configuration

Project 5: Cross-Region Backup Strategy

- Launch EC2 in Region A
- Create and copy EBS snapshot to Region B
- Restore EC2 in Region B
- Validate application availability

Project 6 - Deploy a Static website in S3 directly.

- Create Static Website Files
- Create an S3 Bucket
- Upload Website Files
- Enable Static Website Hosting
- Make Bucket Public (Bucket Policy)

- Access Your Website
